

THE FACIAL STUDY

To attain the best results from your Herbal-Ice Sculpting Facial Massage it is important for Margarita Aburto Facial Consultants to study your facial features closely, including the natural shape of your eyes, nose, forehead, chin and neck.

You may need to have some sculpting, firming or fat reduction work done on your 'double-chin', around your eyes, across your forehead or along your cheekbones.

During the Facial Study process you and your Consultant will assess and evaluate which areas of your face will be best to work on. Herbal-Ice Sculpting Facial Massage treatments increase your body's fat absorption capacity and the more than 62 ingredients (most of which are herbs, leaves, roots, bark, flowers, natural oils and essences) stimulate the development and production of healthy new skin cells.

"Awesome! I came in for a facial and got a mini-face lift. I felt my body (face) was being sculpted. When I saw my face after the treatment I was completely amazed at how the wrinkles and facial marks had been erased. Thank you." – Maricela H.
